Availability: remote / hybrid / location by agreement

Professional Profile

I build web and mobile applications from requirements to working releases. AI helps generate and revise code; I remain responsible for architecture, business logic, integration and quality. Over 20 years in information systems gives me an end-to-end view, from data models and APIs to testing and delivery.

Core Competencies

Architecture: Requirements and use cases · solution and stack selection · data models · APIs and integrations · access control.

AI-assisted delivery: Task decomposition · context management · reviewing and correcting generated code · extending existing systems.

Quality & release: Scenario and browser-based tests · regression checks · build and staging · release and user acceptance.

Technology: PHP · Python/FastAPI · JavaScript · HTML/CSS · MySQL, PostgreSQL, MS SQL Server · Framework7/Cordova · Node.js/Vite · Git · Linux/Apache. AI: ChatGPT, Gemini, Grok, Claude, Codex.

Selected Engineering Work

TimeChecker

Independent product · preparing for launch

Designed and built, with AI, a time-tracking and team-availability system: web app, Android APK and Chrome extension. Implemented employee statuses, leave requests, approvals and timesheet data.

Outcomes

- Functional multiplatform product undergoing beta testing ahead of public launch.
- User feedback led to a unified sickness-reporting flow and support for distributed teams' time zones.

Cezyo

B2B/B2C marketplace · Project Manager / Lead Analyst · 2024–2025

Within a large marketplace project, proactively built an AI-assisted internal tool for checking and synchronizing i18n keys, managing language resources and publishing translations.

Outcomes

- Approved by the CTO and tech lead; deployed and used in production.
- Replaced manual file hand-offs among frontend, backend and translators with a validated, self-service workflow.

Engineering Work — continued

syscreator.org

Independent platform · live website

Built, with AI, a multilingual PHP/MySQL portfolio platform with its own API, admin interface, reusable page templates and linked entities for roles, projects, skills and testimonials.

Outcomes

- Live in five languages; relevant linked content is assembled automatically.
- New role and project pages can largely be added through database content without new templates.

Buddy

Independent travel service · in development

Developing a stand-alone service derived from Sweet Georgia: separate authentication, shared FastAPI backend and object-level permissions tied to trip membership and application status.

Outcomes

- Working prototype includes trip creation and publishing, search, applications, a personal dashboard and candidate messaging.
- Integration testing remains in progress; group chat and trip editing are not yet complete.

Professional Background

Sweet Georgia LTD — Founder / Director (2014–2026): built and developed a digital travel platform and managed delivery. At Cezyo (2024–2025), worked as Project Manager / Lead Analyst; the localization tool was an additional engineering initiative.

Education

Tashkent Polytechnic Institute, 1989 · Automation and Telemechanics; Automated Control Systems.

Languages

Russian — native; English — B2; Spanish — B1; Georgian — A2; Uzbek — B1.

Possible Engagement Models

End-to-end contract development · taking over and extending an existing product · long-term product-team role with clearly defined ownership.
